

At a glance...

- Operate from a world class jurisdiction in the event of a disaster
- Operate for up to 90 days under your existing primary license
- Obtain peace of mind by using a licensed disaster recovery provider
- Join a client base who have already benefited from the protection our services provide

A Jurisdiction with a Proven Disaster Recovery Track Record

Imagine a number of unrelated incidents virtually destroying the telecommunications infrastructure of your primary jurisdiction. This sounds unlikely but is exactly the situation that a number of operators faced in December 2008.

Clients from all over the world regularly benefit from the protection that Domicilium provide. Operators from Canada to Malta have invoked during outages in their chosen jurisdiction mitigating both financial and reputational risks associated with downtime.

Domicilium have been providing disaster recovery services to a number of different business sectors for over ten years. As a licensed Isle of Man disaster recovery provider we offer the co-location and networking facilities on which the Island's reputation has been built.

If problems occur you need to know that your business will continue to operate. Domicilium provide the same high quality network and co-location service to all its clients. These world class services are underpinned by our technical team who will do what it takes to keep you running. We have the commitment, reputation and experience to help you protect your business when it is at its most vulnerable.

In the unlikely event of a disaster in your primary jurisdiction, wouldn't you want the peace of mind that only Domicilium can provide?

Jonathan Wright - director of wholesale products at Interoute which manages part of the optical fibre network - told the BBC that the effects of the break would be felt for many days.

"This will grind economies to a halt for a short space of time," he said "If you look at, say, local financial markets who trade with European and US markets, the speed at which they get live data will be compromised."

"If you think how quickly trades can be placed, if they are suffering from bad latency times, then by the time a trade is placed, the market may well have moved on."
